

# dyts

delivering your total security

## Complete peace of mind

Deciding which IT security products are right for your business isn't easy. Working out how to configure and maintain them is even harder. DYTS will take care of all your IT security concerns, leaving you free to concentrate on your business.

### Our comprehensive IT security services include:

#### Robust and flexible IT security solutions

We will get to know your business and then supply, install and configure the products you need to ensure your complete protection. The solution we deliver will be tailored precisely to the needs of individual users.

#### Secure, resilient Internet access

Let DYTS install and manage your Internet connection, so that when issues occur you have a single point of contact. We'll help you implement fail-over strategies and maximise the speed of your service.

#### Reliable and responsive support services

Through regular meetings, reporting and remote monitoring, we will ensure that your defences remain robust. When issues do occur, we can provide a fast and effective on-site response.

#### Expert IT security advice

Whether you want to implement a new 'Responsible Internet User Agreement' for your staff or keep abreast of recent data protection legislation, DYTS will guide you along the way.

## HIGHLIGHTS

*A **one-stop-shop** for IT security products, expert advice, secure Internet connectivity and support services*

*A professional yet **personal service**, tailored to your business needs*

*The **peace of mind** that comes from knowing that your data and systems are fully protected*

*A local business that you can trust for **good advice** and rely on in an emergency*

As a small or medium-sized business, you probably can't afford to employ an in-house IT security expert full time. But you can't afford to take risks either. Viruses, malware and other forms of web-based attack are on the increase, and, every month, businesses like yours grind to a halt due to inadequate defences.

### Expert advice...

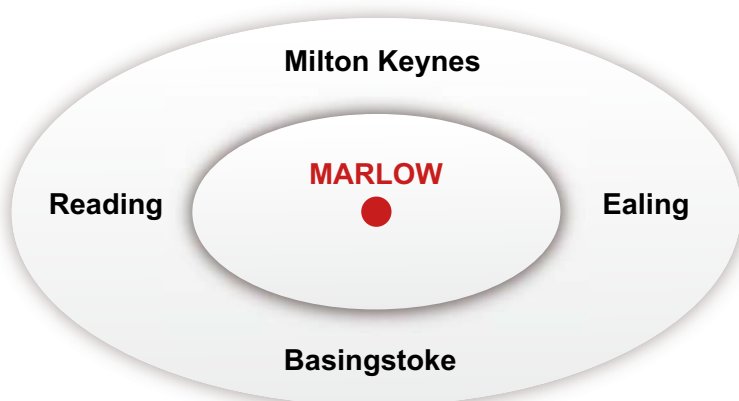

DYTS is a local company that provides the expert IT security advice you need. We can take care of all aspects of your IT security, from installing new products and setting up your Internet connection to maintaining your software licenses and providing support.

As an independent company, we recommend products from different vendors and deliver solutions that are precisely tailored to our customers' business needs.

### ...and local support

DYTS is based in Marlow in Buckinghamshire and serves customers in the surrounding area, in towns and cities including Milton Keynes, Oxford, Reading, Basingstoke, Guildford, Maidenhead, Slough, Luton and West London.

As a small business, we can offer a truly personal service and be flexible to accommodate you, whatever your requirements are. We offer a rapid response to emergencies and can provide out-of-hours support when needed.

*“Whether your systems have been exposed to a virus or you are concerned about employees’ use of social networking sites, you need professional advice. Put your trust in DYTS, and we will give you the peace of mind that you need.”*
