

delivering your total security

SPECIAL OFFER

Evaluate a **WatchGuard XTM** product for free, in your own network, for two weeks, with no up-front investment

Gain professional advice about your IT security and accurate data on your employees' Internet usage

No risk

DYTS is a certified reseller of WatchGuard appliances. We will set up the evaluation unit in 'bridge' mode, so you do not have to disconnect your existing firewall and IT security devices for the duration of the trial.

No business disruption

If required, DYTS can set up the evaluation unit and carry out thorough testing outside of usual business hours.

No costs

There is nothing to pay up-front and, if you decide not to acquire the WatchGuard appliance after the trial period, DYTS will simply uninstall it.

No resource requirements

You do not need to provide anything. DYTS will supply the evaluation unit, a Windows server for running reports, cables and all other materials.

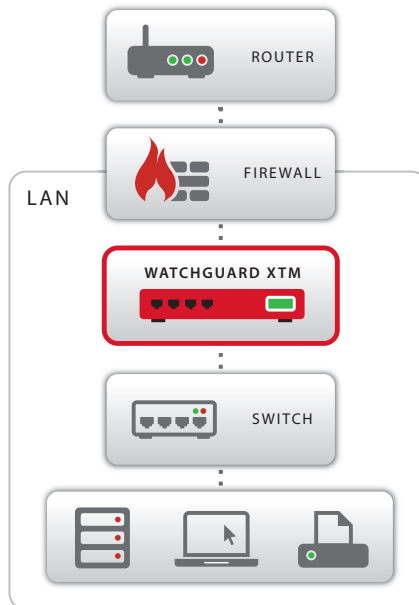

No gimmicks

If after reviewing your network and business requirements, we don't think that the WatchGuard appliance is right for your business, we'll tell you. We won't waste your time installing something that won't add value for you.

Simple Network with WatchGuard XTM installed in bridge mode between the existing firewall and switch

Complex Network with WatchGuard XTM installed in bridge mode between the existing router and firewall

The **WatchGuard XTM** appliance offers a range of tools including:

HostWatch

- Shows which users and devices (including all desktops, smart phones and other mobile products) are connected to the Internet and what they are doing – in real time
- Allows IT managers to quickly pinpoint which users and devices are taking up most bandwidth and causing slow Internet performance

Bytes	Rate
78,342,040	1.186 MBps
89,651,700	120.072 KBps
2,162,912,913	1.828 KBps
11,692,405	878.245 Bps
4,001	467.681 Bps
13,526	352.731 Bps
2,391	20.949 Bps
33,440	13.608 Bps

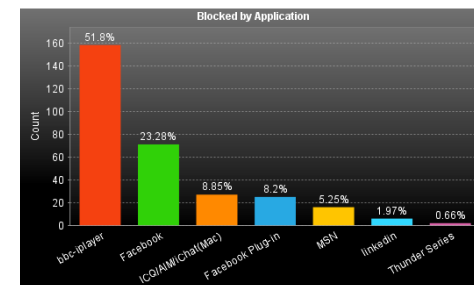

TrafficMonitor

- Displays a much more granular level of detail and allows traffic to be filtered, monitored and analysed
- Enables IT managers to examine specific IP addresses and application traffic and focus in on issues, as they are occurring

Report Manager

- Creates a range of reports on Internet usage over the last hour, 12 hours, 24 hours, week, month or any other time period
- Displays information visually in charts, giving IT managers greater clarity of issues
- Enables organisations to monitor inappropriate Internet use, such as visits to YouTube, eBay and Sky Sport
